

RF-EAS Tags and Labels

Comprehensive EAS program

Radio frequency-based tags and labels

Broad range of disposable and reusable tags and labels

All types of merchandise protected

Disposable tags and labels deactivated without finding them at POS

Checkpoint's broad range of tag and label offerings gives retailers more options than any other EAS technology. The reason is that all of Checkpoint's tags and labels are radio frequency-based, allowing retailers to protect apparel with reusable hard tags, Flex tags or Designer tags while using disposable labels for all other merchandise. Checkpoint sensors will detect any Checkpoint RF tag or label – reusable, disposable or source tagged.

Checkpoint's disposable EAS tags and labels provide retailers with a versatile and wide selection. Available in a range of sizes, Checkpoint's paper-thin RF labels protect all types of merchandise found in drug stores, supermarkets, mass merchandisers, apparel stores, hardware stores, and sporting goods stores. And, all of Checkpoint's disposable tags and labels are deactivatable without having to be found or touched during checkout.

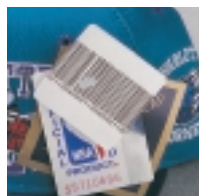

Easy to apply, Checkpoint labels protect everything from meat and deli items to health and beauty care products such as fragrances.

Checkpoint's paper-thin, non-contact deactivatable labels can be disguised with standard or customized messages. Labels can be imprinted with price, inventory, promotional or barcode information.

RF-EAS Tags and Labels

Every retailer in every retail market can turn to Checkpoint Systems, Inc., for the security tags and labels that best meet their needs. From ink tags to paper-thin RF labels, from hard tags to embedded source tags, Checkpoint's tag and label offerings exceed retail expectations.

Available in a variety of formats, Checkpoint's reusable hard tags visibly protect apparel and high-value merchandise by deterring shoplifters. Using Checkpoint detachers units, checkout personnel can easily remove the hard tags in seconds.

Reusable Designer tags, which can be imprinted with a store's name, logo or promotional message, are encased in clear plastic. Flex tags, made of lightweight, durable Tyvek® and printed with bar codes, look like standard hang tags. Checkpoint's ChekInk® II fluid tags, used alone or to complement an EAS program, serve as an effective deterrent. All must be removed at checkout.

All of Checkpoint's EAS tags and labels contain a passive resonant electronic circuit, which gives retailers the option of combining hard tags and disposable tags and even source tags as part of a comprehensive EAS program. No other EAS technology offers as much flexibility for retailers in implementing an EAS program that meets their unique needs.
